CC comprising the promoter or fragments and a transgenic plant comprising CC the vector. The promoter or fragments are useful for expressing a conclude tide sequence of interest. The transit peptide is useful for cc targeting an associated protein of interest to plastids. A nucleic acid CC which expresses polypeptide having lipoxygenase activity is useful for CC inhibiting fungal mycotoxins when transformed into a plant. The cc inhibiting fungal mycotoxins The promoter is useful for regulating transcription of a chemically inducible but not CC useful for regulating transcription of a chemically inducible but not CC wound or pathogen inducible gene, which involves applying a chemical CC regulator to a plant or seed containing a chemically regulatable CC nucleotide sequence. Transgenic plants as described above are useful for Dreeding improved plant lines that for example increase the effectiveness CC conventional methods such as herbicide or pesticide treatment or allow to dispense with the methods due to their modified genetic properties. CC New crops with improved stress tolerance can be obtained that, due to their optimised genetic equipment yield harvested product of better quality than products that were not able to tolerate comparable adverse CC constitute of the conditions. The present sequence is the glutathione-S-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid molecule (a promoter of chemically induced cDNA (RCI-1), which encodes a lipoxygenase) capable of driving chemically-inducible but not wound- or pathogen-inducible expression of an associated nucleotide sequence. Also included are the RCI-1 cDNA, its encoded protein, a 4.5kb genomic clone for the lipoxygenase gene, promoter fragments, the lipoxygenase transit peptide which directs expressed proteins to the plastid, a vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Chimeric - Chimeric -
                                                     transferase (GUS) sequence (containing an intron from solution referred to as GIG) whose expression is driven

Petermination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRt digestion of Drosophila DNA provided by the BDGP from the isogenic Strain y2; cn bw Sp, the same strain used for the BDGP's and the force that all the approach of the library or the part of the same strain used for the BDGP's and the force that all the college of the library or the same strain used for the library and but to Order individual BAC Clones the entire library or the same strain used for the library and but to Order individual BAC Clones the entire library or the same strain used for the library or the library or the same strain used for the library and but to Order individual BAC Clones the entire library or the library or the library or the library or library or the library or library o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TCAGGTTCGTCGGGCATTTCAGCGAAGCGCCGGGCACGTCGGCGTTCGGGACGGCGGAGC

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                       Submitted (23-JUL-1999) Genoscope - Centre National BP 191 91006 EVRY cedex - FRANCE (E-mail : segref@go

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPC1-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the 180genic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library or filters for hybridization from the BACGPC Resource Center can be

US-09-940-550A-10

Sequence 10, Application US/09940550A

Publication No. US20030033635A1

GENERAL INFORMATION:

APPLICANT: MANKIN, LUKE

APPLICANT: MCKERSIE, BRYAN

TITLE OF INVENTION: SELF-EXCISING POLYNUCLEOTIDES AND USES THEREOF

FILLE REFERENCE: 16313-0055

CURRENT APPLICATION NUMBER: US/09/940,550A

CURRENT FILING DATE: 2001-08-27

PRIOR APPLICATION NUMBER: 60/227,961

PRIOR FILING DATE: 2000-08-25

NUMBER OF SEQ ID NOS: 12

SOFTWARE: PATENTIN Ver. 2.1

SEQ ID NO 10

LENGTH: 2031

TYPE: DNA

ORGANISM: Artificial Sequence

FEATURE:

OTHER INFORMATION: Description of Artificial Sequence: C31int* DNA
